Solar Monitoring Solutions

Avoid Supply Chain Delays - Place Your Order Early!

While we still have and carry in stock multiples of our standard items, we advise that customers place their orders when confirmed EARLIER rather than later. This is particularly true for larger orders, LDC SCADAs, smart grid projects, or projects specifying other meters/weather instruments.

We see global supply chain challenges across our supplier chain, and it is safest to expect a longer than usual lead time. Some non-standard parts we have received lead time of up to 2 months, where before would take 1 – 2 weeks.

How to secure your project and pricing:

1. Confirm the project & design with us
2. We will provide you a quote and single line drawing
3. Confirm the order by a PO &/ deposit guidelines where applicable
4. Estimated timeline will be given to you

Ordering early can help your lead time for a smoother commissioning of your site rather than going through unexpected delays.

If you are unsure what a standard order and custom order is feel free to contact us.
